This volume constitutes the proceedings of the 11th International Conference on Social Informatics, SocInfo 2019, held in Doha, Qatar, in November 2019. The 17 full and 5 short papers presented in these proceedings were carefully reviewed and selected from 86 submissions. The papers presented in this volume cover a broad range of topics, ranging from the study of socio-technical systems, to computer science methods to analyze complex social processes, as well as social concepts in the design of information systems.

This book presents the results of the major EU project Promine. For the first time there is now a European database available on mineral deposits, as well as 3D, 4D and predictive models of major mineral belts in Europe: Fennoscandia (Skellefteå and Vihanti-Pyhäsalmi), the Fore-Sudetic basin (Kupferschiefer deposits in Poland and Germany), the Hellenic belt in northern Greece, and the Iberian Pyrite belt and Ossa Morena zone in Spain and Portugal. The book also describes the modelling

techniques applied and how different types of software are used for three- and four-dimensional modelling. Furthermore, fundamental descriptions of how to build the database structure of three-dimensional geological data are provided and both 2D and 3D predictive models are presented for the main mineral belts of Europe.

The papers in this proceeding discuss current and future trends in wearable communications and personal health management through the use of wireless body area networks (WBAN). The authors posit new technologies that can provide trustworthy communications mechanisms from the user to medical health databases. The authors discuss not only on-body devices, but also technologies providing information in-body. Also discussed are dependable communications combined with accurate localization and behavior analysis, which will benefit WBAN technology and make the healthcare processes more effective. The papers were presented at the 13th EAI International Conference on Body Area Networks (BODYNETS 2018), Oulu, Finland, 02-03 October 2018.

Anthropology has two main tasks: to understand what it is to be human and to examine how humanity is manifested differently in the diversity of culture. These tasks have gained new impetus from the extraordinary rise of the digital. This book brings together several key anthropologists working with digital culture to demonstrate just how productive an anthropological approach to the digital has already become. Through a range of case studies from Facebook to Second Life to Google Earth, Digital Anthropology explores how human and digital can be defined in relation to one another, from avatars and disability; cultural differences in how we use social networking sites or practise religion; the practical consequences of the digital for politics, museums, design, space and development to new

online world and gaming communities. The book also explores the moral universe of the digital, from new anxieties to open-source ideals. Digital Anthropology reveals how only the intense scrutiny of ethnography can overturn assumptions about the impact of digital culture and reveal its profound consequences for everyday life. Combining the clarity of a textbook with an engaging style which conveys a passion for these new frontiers of enquiry, this book is essential reading for students and scholars of anthropology, media studies, communication studies, cultural studies and sociology.

The life story of Jessica Turner, a shy teenager whose militant father pushes her into the arms of intelligent but troubled Paul Peterson. Together they make a decision that changes their lives, and their unborn child's, forever. As an adult, Jessica discovers that in order to live in the present, she must come to terms with her past.

Corporate actions are events that affect large corporations through to the individual investor - even those that own a single-share! All organizations that hold equity and debt securities for themselves and/or on behalf of others are affected when the issuer of a security announces an income or corporate action event. The successful management of the array of different event types requires understanding of the inherent risks, and tight controls at critical points in the event lifecycle. The management of income and corporate action events are important and essential parts of the securities industry business. Written by authors with many years experience within this sector, Corporate Actions: A Guide to Securities Event Management sets out to demystify the subject and provides a thorough, step-by-step introduction to corporate actions and income events. Corporate Actions is a comprehensive source for understanding a major component of operational processing. The individual components and their relation to each other within the corporate actions lifecycle are explained in detail, through which the reader will gain a clear and thorough understanding of the lifecycle together with potential processing risks and the strategies to mitigate Corporate Actions is essential reading for all those involved in the securities industry, from new recruits to those involved in both the day-to-day operations process and those within executive management. It will also prove invaluable to those providing consultancy and software solutions to the securities industry. Corporate Actions is the first major work on this subject. Many people within the securities industry have heard of corporate actions - many people know they can be highly risky - many organizations have lost vast sums of cash in attempting to process them - very few understand them!
