In what kind of world and for what kind of thought is time real, history open, and novelty possible? In what kind of world and for what kind of thought does it make sense for a human being to look for trouble rather than to stay out of trouble? In this long-awaited work of general philosophy, Roberto Mangabeira Unger proposes a radical reorientation of established ideas about nature, mind, society, politics, and religion. He shows how we have to change our beliefs if we are to succeed in doing justice to our most distinctive contemporary experiences, discoveries, and ideals. The Self Awakened mobilizes the resources of several philosophical traditions, and develops the unrecognized revolutionary implications of the most influential of these traditions today--pragmatism. Avoiding technical jargon and needless complication, this book makes a case for philosophy as the supreme activity of the intellect at war, insisting on its power to deal with what matters most.

Set at the intersection of political theory and environmental politics, yet with broad engagement across the environmental social sciences and humanities, The Oxford Handbook of Environmental Political Theory, defines, illustrates, and challenges the field of environmental political theory (EPT). Featuring contributions from distinguished political scientists working in this field, this volume addresses canonical theorists and contemporary environmental problems with a diversity of theoretical approaches. The initial volume focuses on EPT as a field of inquiry, engaging both traditions of political thought and the academy. In the second section, the handbook explores conceptualizations of nature and the environment, as well as the nature of political subjects, communities, and boundaries within our environments. A third section addresses the values that motivate environmental theorists—including justice, responsibility, rights, limits, and flourishing—and the potential conflicts that can emerge within, between, and against these ideals. The final section examines the primary structures that constrain or enable the achievement of environmental ends, as well as theorizations of environmental movements, citizenship, and the potential for on-going environmental action and change.
