"The authors of this report seek to understand how network-centric operations (NCO) capabilities are a source of combat power for the Army's Stryker brigade and to determine the extent to which the tenets of NCO are realized by the unit. Using a broad range of measures of effectiveness, the authors compared the performance of a Stryker brigade with that of a nondigitized light infantry brigade in certification exercises at the Joint Readiness Training Center and found that the Stryker brigade's superior networking capabilities, superior shared situational awareness, speed of command, and ability to control the speed of command vastly improved the brigade's performance in these exercises. Using NCO measures of effectiveness, this analysis sheds light on the NCO capabilities that made the Stryker brigade a more agile and effective combat force. The authors conclude by discussing the potential implications of future NCO capabilities for future Army forces."--BOOK JACKET.

Understanding the fatigue behaviour of structural components under variable load amplitude is an essential prerequisite for safe and reliable light-weight design. For designing and dimensioning, the expected stress (load) is compared with the capacity to withstand loads (fatigue strength). In this process, the safety necessary for each particular application must be ensured. A prerequisite for ensuring the required fatigue strength is a reliable load assumption. The authors describe the transformation of the stress- and load-time functions which have been measured under operational conditions to spectra or matrices with the application of counting methods. The aspects which must be considered for ensuring a reliable load assumption for designing and dimensioning are discussed in detail. Furthermore, the theoretical background for estimating the fatigue life of structural components is explained, and the procedures are discussed for numerous applications in practice. One of the prime intentions of the authors is to provide recommendations which can be implemented in practical applications.
