Enterprise Resource Planning (ERP) refers to large commercial software packages that promise a seamless

integration of information flow through an organization by combining various sources of information into a single software application and a single database. The outcome of ERP itself is still a mystery, but the trends and issues it has created will be the enigma that future generations will

have to solve. Traditionally, separate units were created within an organization to carry out various tasks, and these functional areas would create their own information systems thereby giving rise to systems that were not integrated. ERP strives to provide a solution to these

approach to design. The student is directed to appropriate information sources and is encouraged to make decisions at each stage of the design process rather than simply following a design method. Thoroughly revised, updated, and expanded, the accompanying text includes

historic status - shops, offices and civic buildings - rather than those preserved and opened to the public purely as historic attractions.

Although the guidelines are relevant to both categories of building the latter raise significant issues in relation to interpretation (sometimes

referred to as intellectual access), which are largely beyond the scope of this document. This document replaces our 2004 edition.
